

**BOMBAYDC**

# Beyond templates. Premium ecommerce built for

Ecommerce POV

Created By: Team BOMBAYDC  
Created For: Enterprise Client Partnership

# 1.1 The outcomes that matter.

Commerce teams do not buy a store. They buy better business performance.

|   |                   |                                                                 |
|---|-------------------|-----------------------------------------------------------------|
| 1 | Higher conversion | Make discovery, PDPs and checkout convert more visitors.        |
| 2 | Higher AOV        | Use bundling, merchandising and stronger product confidence.    |
| 3 | Repeat purchase   | Create reasons to come back, not just buy once.                 |
| 4 | Loyalty / CLV     | Reward value and deepen the relationship over time.             |
| 5 | Lower abandonment | Reduce drop-offs across cart, checkout and post-click journeys. |

**For premium brands, one more outcome matters: stronger brand-led differentiation.**

The best commerce platforms do more than transact. They communicate positioning, justify premium perception, improve conversion quality, and create pricing power. That is why branded experience, content quality and implementation fidelity are not cosmetic — they are commercial.

- Brand expression
- Content quality
- Merchandising
- Checkout flow
- Lifecycle / loyalty

# 1.2 Why most stores underperform.

The problem is rarely the platform alone. It is how the experience gets designed, merchandised, and translated into build.

## What template-led agencies ship

- Functional storefronts that all look similar
- Generic grids, PDPs and checkout patterns
- Content and imagery treated as page-fillers
- Loyalty and offers bolted on later
- Theme implementation that loses design nuance

## What premium commerce brands actually need

- A store that reflects the brand’s real positioning
- Discovery and PDPs that increase confidence
- Imagery and content as conversion levers
- Lifecycle, loyalty and offers designed into the journey
- A build that preserves the original experience intent

# 1.3 What this now demands from the platform.

To improve conversion, AOV, repeat purchase and loyalty, the platform has to become more than a store.

|   |                              |                                                                                                         |
|---|------------------------------|---------------------------------------------------------------------------------------------------------|
| 1 | A brand environment          | The experience should express what the brand stands for — not what the theme template permits.          |
| 2 | A decision-support system    | Help customers choose with confidence through comparison, context, reassurance and richer PDP logic.    |
| 3 | A merchandising engine       | Surface bundles, edits, recommendations and offers that improve revenue quality, not just transactions. |
| 4 | A loyalty + lifecycle engine | Drive repeat purchase through rewards, recognition, replenishment and well-timed re-engagement.         |
| 5 | A content-rich system        | Treat imagery, copy and editorial storytelling as commerce levers, not cosmetic layers.                 |

When the business outcome changes, the platform has to change. And when the platform has to change, the way it is designed and built must change too.

# 1.4 The full ecommerce loop.

The best commerce systems create value across discovery, conversion, repeat purchase, and loyalty — not just at checkout. Premium commerce is not a storefront problem. It is a full-loop performance problem.

|   |                     |                                                                                                                                                                                  |
|---|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | Discovery           | Help customers find the right product, understand the brand, and enter the right category or edit.<br><br>KPIs: quality traffic, product discovery, product-page depth           |
| 2 | Conversion          | Reduce hesitation with stronger merchandising, richer PDPs, better confidence signals and cleaner checkout logic.<br><br>KPIs: conversion rate, AOV, cart abandonment            |
| 3 | Repeat purchase     | Use offers, replenishment logic, post-purchase follow-up and intelligent recommendations to create return behavior.<br><br>KPIs: repeat rate, reorder rate, revenue per customer |
| 4 | Loyalty & lifecycle | Turn one-time buyers into members through rewards, recognition, exclusive access and relevance over time.<br><br>KPIs: CLV, retention, loyalty participation                     |

# 1.5 How BombayDC creates value across the loop.

This is where premium design, content, intelligent features, and integrated delivery come together.

|   |                     |                                                                                                                                                |
|---|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | Discovery           | Branded storefronts, category edits, rich imagery, story-led landing pages<br><br>Make the brand feel distinctive before the first add-to-cart |
| 2 | Conversion          | Confidence-rich PDPs, smart bundling, better checkout and cross-sell logic<br><br>Improve conversion and AOV without flattening the experience |
| 3 | Repeat              | Offer systems, reorder prompts, post-purchase journeys, intelligent recommendations<br><br>Give customers a reason to come back sooner         |
| 4 | Loyalty / lifecycle | Membership design, rewards logic, recognition, reactivation and CRM-linked journeys<br><br>Increase retention and CLV over time                |

# 1.6 AI-era commerce features worth building.

The point is not “AI-powered commerce.” The point is features that move real commerce KPIs.

|   |                              |                                                                                                                                 |
|---|------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| 1 | Guided product discovery     | Conversational or wizard-led flows that help customers find the right product faster.<br>Moves: discovery, conversion           |
| 2 | Personalized recommendations | Next-best products, bundles and edits based on browsing, purchase and context.<br>Moves: AOV, repeat purchase                   |
| 3 | Smarter offers               | Targeted incentives based on behavior, order value or comeback probability.<br>Moves: conversion, comeback rate                 |
| 4 | Loyalty intelligence         | Tier logic, reward relevance and recognition based on actual customer value.<br>Moves: CLV, retention                           |
| 5 | Lifecycle triggers           | Replenishment, reorder, win-back and seasonal re-engagement journeys.<br>Moves: repeat purchase                                 |
| 6 | Content operations           | AI-assisted catalog enrichment, copy variants, tagging and campaign adaptation at scale.<br>Moves: speed, merchandising quality |

# 1.7 Why BombayDC is different.

The next generation of ecommerce will not be won by templates. It will be won by branded, intelligent, high-performance commerce systems.

|   |                                           |                                                                                                               |
|---|-------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| 1 | Premium stores, not templates             | We design commerce experiences that reflect the brand’s actual positioning and visual world.                  |
| 2 | Content and imagery as performance levers | We treat product storytelling, visual quality and content depth as commercial drivers.                        |
| 3 | Integrated design + tech delivery         | The final build preserves the experience intent, instead of diluting it through generic theme implementation. |
| 4 | Commerce systems, not pages               | We think across discovery, conversion, repeat purchase, loyalty and lifecycle — not just storefront screens.  |

85%  
client repeat business

98%  
on-time delivery

In-house  
tech + analytics + content

Integrated  
design-to-tech execution

# 1.8 Proof: Lotto India launch.

A BombayDC commerce project that shows the intersection of premium design, rich content, mobile-first UX and conversion-minded system thinking.

## Why it matters

- Designed a conversion-first checkout and mobile-first flow
- Used rich imagery, lifestyle video and A+ content to improve product confidence
- Made the store feel like the brand’s first digital expression in India
- Built a flexible design system that moved away from traditional sportswear layouts

“This platform isn’t just an online store — it’s the brand’s first digital expression in India.”

— BombayDC / Lotto launch notes

1.9

# Premium ecommerce for the AI era.

If the store has to do more than transact — if it has to differentiate, persuade, retain and evolve — it needs a different level of design, content, intelligence and build fidelity.

Replatforming → Premium D2C → Conversion + AOV → Loyalty + lifecycle

What to talk to us about

- A premium store that better reflects the brand
- Discovery and PDP work that improves conversion quality
- Checkout, bundles and merchandising that lift AOV
- Repeat purchase, loyalty and lifecycle journeys
- AI-led features that make commerce more relevant
