

Helping banks turn digital investment into business value

Increase acquisition. Grow existing customer relationships. Reduce servicing cost.

BOMBAYDC

Digital products and intelligent workflows for BFSI businesses

Banks can unlock more value from digital across four outcomes.

Acquire

- More qualified digital leads
- Higher application completion
- Lower assisted-sales dependency

Activate

- More active digital customers
- Higher feature discovery and usage
- More completed everyday journeys

Deepen

- More relevant cross-sell and upsell
- More products per customer
- Greater share of wallet

Serve

- More self-service completion
- Lower branch / call centre load
- Faster resolution and lower cost to serve

The constraint is no longer lack of features. It is the gap between customer intent, platform behaviour and business outcomes.

Despite digital investment, value realization remains uneven.

The symptoms are visible across acquisition, adoption, relationship growth and servicing.

Digital acquisition

- High traffic, low conversion
- Product pages inform but do not guide
- Application and onboarding drop-offs remain high
- Assisted sales still needed for clarity

Digital adoption

- Customers use only a small set of features
- Everyday tasks take too many steps
- Feature launches do not automatically create usage
- Engagement drops after basic transactions

Relationship growth

- Product holding remains shallow
- Offers feel generic or poorly timed
- Cross-sell depends on campaigns / RMs
- Data is available, but not turned into next actions

Digital servicing

- Self-service stops before resolution
- Customers fall back to call centres, branches and RMs
- Context is lost across channels
- Cost to serve stays high

Digital value leaks across the customer lifecycle.

The same platform has to help the bank acquire, activate, deepen and serve customers.

BOMBAYDC maps where value is leaking, then focuses the intervention on the journeys that can move the business outcome.

Our response: three simple BFSI offerings

Each offering is tied to a business outcome, not just a design or technology deliverable.

Digital Sales & Acquisition

Increase qualified acquisition and application conversion.

Pre-login website, product discovery, calculators, onboarding, assisted journeys

Digital Engagement & Relationship Growth

Increase adoption, product usage, cross-sell and share of wallet among ETB customers.

Mobile banking, internet banking, financial management, feature adoption, next-best actions

Intelligent Servicing

Reduce servicing cost while improving resolution and customer experience.

Service Intelligence Stack, self-service, routing, RM and employee tools, automation

Why digital acquisition underperforms

The bank may be getting traffic, but the decision journey often does not convert intent into applications.

What the bank experiences

- Low-quality or low-converting leads
- Customers struggle to compare products
- Application and onboarding drop-offs

Why it persists

- Product pages inform, but do not guide
- Journeys are organised around products, not customer decisions
- Assisted support begins too late in the journey

The opportunity: turn digital channels into clearer, more guided acquisition journeys.

BOMBAYDC response: Digital Sales & Acquisition

Increase qualified acquisition and application conversion.

Business outcome: Increase qualified acquisition and application conversion.

Pre-login platform

Make the website a sales and decision platform, not only an information layer.

Product discovery

Help customers find the right product based on need, context and intent.

Calculators and comparisons

Make choices easier to understand and act on.

Application journeys

Reduce breaks between interest, application and onboarding.

Assisted journeys

Bring guidance into the journey before customers drop off.

Personalised guidance

Use context to make the next step clearer and more relevant.

Why ETB value remains under-realised

Existing customers may transact digitally, but that does not automatically deepen the relationship.

What the bank experiences

- Low usage beyond basic transactions
- Weak discovery of relevant products and features
- Cross-sell often feels generic or poorly timed

Why it persists

- Digital journeys are built around product silos
- Customer data exists, but is not translated into action
- The platform does not recognise important customer moments

The opportunity: make digital banking a relationship-growth channel, not only a transaction channel.

Why digital adoption remains low

Feature-rich platforms still underperform when users cannot find what matters or why it matters.

What the bank experiences

- Customers use only a fraction of the platform
- New features launch but do not get adopted
- Engagement drops after onboarding

Why it persists

- Interfaces are feature-heavy and difficult to navigate
- Journeys are organised around products rather than tasks
- Post-login guidance is limited and often not contextual

The opportunity: design adoption into the platform instead of hoping users discover value on their own.

BOMBAYDC response: Digital Engagement & Relationship

Growth Increase adoption, engagement, product usage, cross-sell and share of wallet among ETB customers.

Business outcome: Increase adoption, engagement, product usage, cross-sell and share of wallet among ETB customers.

Mobile and internet banking

Modernise the core digital banking experience around customer tasks.

Feature discovery

Make useful features easier to find and understand.

Financial management

Help customers manage money, goals and decisions more clearly.

Next-best actions

Surface timely prompts, actions and product opportunities.

Life-stage journeys

Connect products to moments such as salary, family, travel, savings and borrowing.

Relationship growth

Move from generic offers to relevant guidance and deeper product usage.

Why servicing still leaks to assisted channels

Digital channels often answer the easy part, but customers still move to human channels for clarity and completion.

What the bank experiences

- High cost to serve
- Repeat calls, branch visits and RM dependency
- Slow or unclear resolution

Why it persists

- Customers do not know the correct service path
- Digital journeys stop before resolution
- Context is lost across channels and systems

The opportunity: make digital servicing capable of guiding, routing and resolving more needs.

BOMBAYDC response: Intelligent Servicing

Reduce servicing cost while improving resolution and customer experience.

Business outcome: Reduce servicing cost while improving resolution and customer experience.

Service Intelligence Stack

A layer that helps identify, guide, route and resolve service needs.

Guided self-service

Make routine issues easier to complete without assistance.

Contextual routing

Send the right issue to the right channel with the right context.

AI-assisted workflows

Use intelligence to help customers and teams resolve faster.

RM and employee tools

Support assisted teams with better context and next steps.

Service automation

Reduce avoidable manual work and improve consistency.

What BOMBAYDC brings together

The work requires more than design alone. We combine the disciplines needed to move from business problem to working product.

Product strategy

Connect business goals, customer needs and product decisions.

Behaviour science

Understand what users do, where they hesitate and what helps them act.

Experience design

Make complex banking journeys clear, useful and trustworthy.

Design engineering

Move quickly from concept to working product within real constraints.

Data and intelligence

Use signals to guide journeys, personalise actions and measure value.

Content and communication

Make choices, products and actions easier for customers to understand.

How we move from diagnosis to implementation

Focused interventions reduce risk and create momentum inside real banking constraints.

Typical rhythm: 3 days to align on a concept, 3 weeks to validate a prototype, 3 months to launch a focused MVP.

Relevant experience and proof

BOMBAYDC has worked on complex banking and enterprise platforms where clarity, trust, adoption and constraints matter.

Banking experience

Mobile banking, internet banking, onboarding and servicing journeys.

Enterprise constraints

Legacy systems, stakeholder complexity, phased rollouts, compliance and risk.

Design to build

Strategy, UX, UI, design systems, engineering and product delivery.

Outcome lens

Work anchored to adoption, conversion, engagement, servicing and business value.

Where is digital value leaking most in your bank?

Acquisition • Engagement and relationship growth • Servicing

Let us identify the highest-value journeys to fix first.
