INTRODUCTION

Digital Platforms for the AI Era.

We build intelligent digital platforms that increase adoption, retention, and revenue.

What that means

- Products designed by BombayDC are used by over 5Cr people
- Built for B2B, BFSI, commerce and enterprise corporate platforms
- Focused on large digital systems where adoption and business value matter

From design-led digital experiences to intelligent, adaptive platforms.

Our next phase is about enterprise-grade products that can think, guide, and perform - not just transact.

CORPORATE SNAPSHOT

Ten years of building digital products at scale.

A decade of design, product and platform delivery with enterprise trust.

10+

years in business

200+

digital products

headquartered

85% repeat business reflects long-term trust, not one-off project delivery.

Intelligence is the new design fabric.

Enterprise platforms were built for a transactional era. The AI era demands platforms that can think, adapt, and perform.

Then

- Static interfaces
- Fixed journeys
- Transaction-first design
- Manual decisions
- Sequential delivery cycles

Now

- Adaptive experiences
- Context-aware journeys
- Decision-support systems
- Intelligence inside workflows
- Continuous optimisation

WHAT ENTERPRISES NEED NOW

Better business outcomes are changing what platforms need to do.

Higher adoption, lower friction and better ROI require a new kind of platform - and a new way of building it.

Outcomes clients want

- Higher adoption
- Lower sales & service friction
- More self-serve behaviour
- Better partner/customer productivity
- Higher ROI from existing systems

What that means for the platform

- Role-based, task-first journeys
- Clearer decisions and next actions
- Behavior-aware, adaptive interfaces
- Connected workflows across systems
- Built to evolve continuously

BombayDC response

- Intelligent products
- Parallel strategy, design & engineering
- 3-day / 3-week / 3-month lifecycle
- A new multidisciplinary product team
- KPI-led optimisation

HOW WE WORK

A new product design and development lifecycle.

Our model runs strategy, design and engineering in parallel workstreams - reducing risk and accelerating delivery.

3 days

Product concept

Align stakeholders on scope, objectives and measurable outcomes.

3

weeks

Working prototype

Create a prototype that validates desirability, feasibility and business viability.

3

months

Live MVP

Ship an MVP with real users and begin continuous evolution.

New team structure

Business Analyst · Behavioural Scientist · AI Product Designer · AI / Full-Stack Developer · Data Analyst

What we build

Focused on high-value platforms where design, technology and intelligence converge.

B2B Platforms

Sales, partner and customer platforms that reduce friction, increase adoption and accelerate revenue.

BFSI Platforms

Intelligent digital banking and financial journeys built for adoption at scale.

Commerce Platforms

Omni-channel e-commerce platforms that adapt to user behaviour and increase revenue.

Corporate Platforms

Communicating the brand, the products and the company through enterprise-level websites and internal systems.

CAPABILITIES

Strategy to scale, design to adoption, technology to performance.

An integrated model spanning strategy, design, engineering, analytics and content.

Strategy

Product strategy
User research
Service design
Experience audits

Design

SELECTED WORK

Platforms built for adoption, clarity and business value.

A snapshot of the kinds of enterprise problems we help solve.

Tata Communications

Reimagined a global B2B platform across onboarding, ordering and service management to support higher adoption under enterprise constraints.

BFSI platform

Simplified high-stakes financial journeys for clarity, trust and scalable usage.

Commerce experience

Designed an omni-channel commerce platform focused on conversion, retention and smarter customer journeys.

Corporate platform

Built enterprise-grade corporate and internal platforms that communicate brand, product and business value at scale.

WHY ENTERPRISES TRUST US

Structured delivery. Enterprise readiness. Design-to-tech integration.

We combine premium product thinking with the operational discipline required for complex programmes.

85% client repeat business rate

98% on-time delivery

Dedicated staffing

KPI-led projects

Performance-linked pricing

Global awards

Global + local product experts

Enterprise constraints handled

Design-to-tech integrated delivery

In-house technology team

In-house behavior scientists

In-house analytics

SELECTED CLIENTS & TEAM

Trusted by enterprises. Built by global product experts.

A local foundation with product talent shaped by global standards and enterprise delivery.

Selected clients

Tata Communications	Tata Steel
Godrej	Blue Star
JSW	Mahindra
Financial services clients	Commerce brands

Global product experts

Cross-functional teams spanning product strategy, behavior insight, AI-aware design, engineering and analytics.

- Premium product thinking
- Enterprise-grade execution
- Local + global context
- Built for complex digital systems

Let's build what's next.

Intelligent digital platforms for the AI era.
